A&D Recent Public Commitments to Siemens Xcelerator Portfolio

Northrop Grumman
July 2021

Lockheed Martin
January 2022

“The company uses Xcelerator to integrate repositories of program data and seamlessly share product performance details [...] and will leverage Siemens’ Xcelerator portfolio as part of its technology stack to help manage its digital engineering design process and product data in an integrated single-source environment.”

“The company plans to leverage Xcelerator to achieve its goals for mission-driven digital transformation—accelerating program lifecycles, driving cost savings and fostering greater innovation.”

<https://www.nlm.automation.siemens.com/global/en/our-story/newsroom/siemens-lockheed-xcelerator-aerospace/104633>

US Air Force
January 2021

“Leveraging an enterprise-wide system to produce a digital thread throughout the product lifecycle will change the way we field capability. The DAF has decided to use Siemens’ Teamcenter as its Product Lifecycle Management (PLM) data management platform”

- Dr. William B. Roper Jr., Assistant Secretary of the Air Force (Acquisition, Technology, & Logistics)

Memorandum for All Department of the Air Force Program Executive Officers

Airbus
January 2022

“This is a game-changer in an industry looking to recover quickly from unprecedented challenges. By realizing the benefits of a model-based development process, Capital helps world-class companies like Airbus reduce complexity, lower risk and boost overall productivity.”

Sierra Space
March 2022

“Siemens’ solutions will significantly accelerate development of our unique space platform - the first to combine all aspects of space transportation, space destinations and space applications in a holistic ecosystem.”

- Tom Vice, CEO, Sierra Space

<https://sierraspace.com/newsroom/press-releases/sierra-space-to-revolutionize-space-exploration-with-siemens-xcelerator/>

General Atomics Aeronautical Systems
April 2022

“The customer support and responsiveness we get from Siemens is like no other vendor I have worked before”. “The engagements Siemens has with the aerospace and defense industry are top notch.”

- Dee Wilson, Vice President of Engineering, General Atomics Aeronautical Systems, Inc

About Siemens Government

Siemens Government Technologies, Inc.

Global Support

- Multi-billion dollar, decades-long support for the U.S. Government
- Integrator for Siemens products, services, solutions to DoD/Mil & Federal customers, CONUS & OCONUS
- Sponsored by the DCSA and maintains a TS Facilities clearance; CMMC Ready

U.S. HQ

- HQ for Siemens Government Technologies, Inc. in Crystal City, VA
- >200 employees in multiple locations across the U.S. and internationally
- Onsite with DoD/Federal customers across CONUS and OCONUS
- Serve every U.S. Federal Cabinet-Level Agency

Siemens Digital Industry Software (DISW)

Includes Siemens EDA

Siemens Digital Industries Software

Business Unit of Siemens Digital Industries
Workforce: 22,000+
Locations: 250 in 36 countries
Customers: 170,000+

Organization

Electronic Design

Mechanical Product Engineering

Electronic Board & Interconnect

Mechanical Simulation and Test Solutions

Manufacturing Engineering

Manufacturing Execution System

Cloud Application Services

Microelectronics Supply Chain Visibility

Securing Defense-Critical Supply Chains

An action plan developed in response to
President Biden's Executive Order 14017

February 2022

“Supply Chain Visibility: DoD is still building visibility into the sub-tiers of the microelectronics supply chain; until there is greater visibility, it will be difficult to identify certain supply chain threats, vulnerabilities, and risks. Visibility is further eroded by system-level (next-level assembly comprised of multiple microelectronics components) manufacturers who simply seek the lowest cost producers and are source agnostic.”

How President Biden's 100-Day Supply Chain Review Sets the Stage for New American Supply Chain

Only by adopting a whole-of-government approach to supply chain resilience – and by leveraging **cutting-edge visibility tools** – can we hope to tackle today's multifaceted supply chain challenges. [\[source\]](#)

The Big Hack: How China Used a Tiny Chip to Infiltrate U.S. Companies

The attack by Chinese spies reached almost 30 U.S. companies, including Amazon and Apple, by compromising America's technology supply chain, according to extensive interviews with government and corporate sources. [\[source\]](#)

Counterfeit Chinese Parts Slipping Into U.S. Military Aircraft: Report

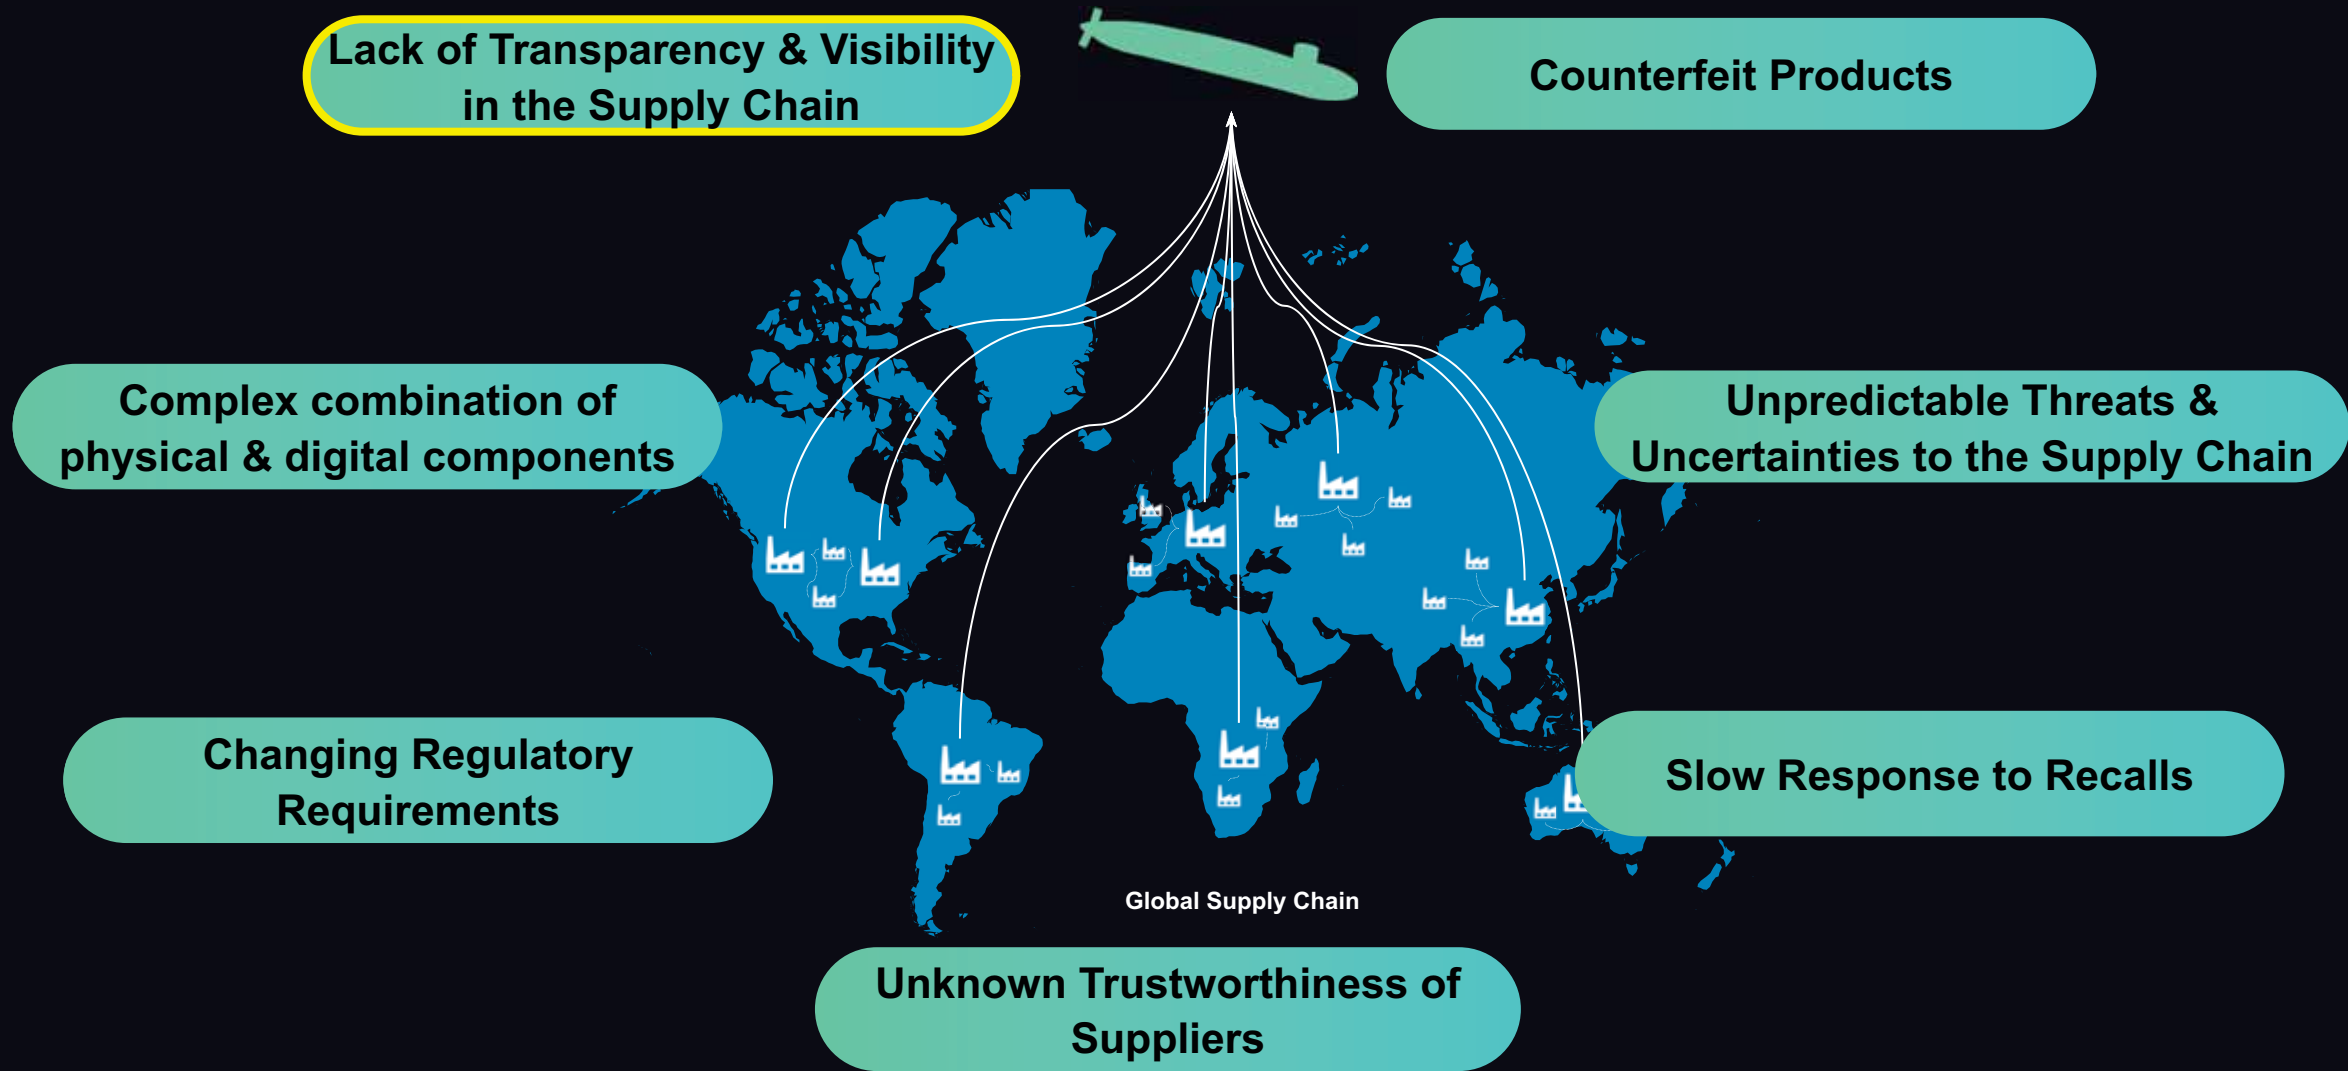

A year-long investigation conducted by the Senate Armed Services Committee found more than one million suspected counterfeit parts made their way into the Department of Defense's supply chain and were bound for use by "critical" military systems. [\[source\]](#)

Chinese Alloy in F-35 Parts Not Likely Security, Safety Risk, Says Pentagon Acquisition Chief

"The contractor **self-reported** that an alloy that goes into a magnet was made in China..." [\[source\]](#)

The US Needs A Strategy To Secure Microelectronics – Not Just Funding

Instead of throwing subsidies around indiscriminately, the authors argue, the US government needs to invest only in crucial new technologies while crafting policy incentives to shift industry behavior. [\[source\]](#)

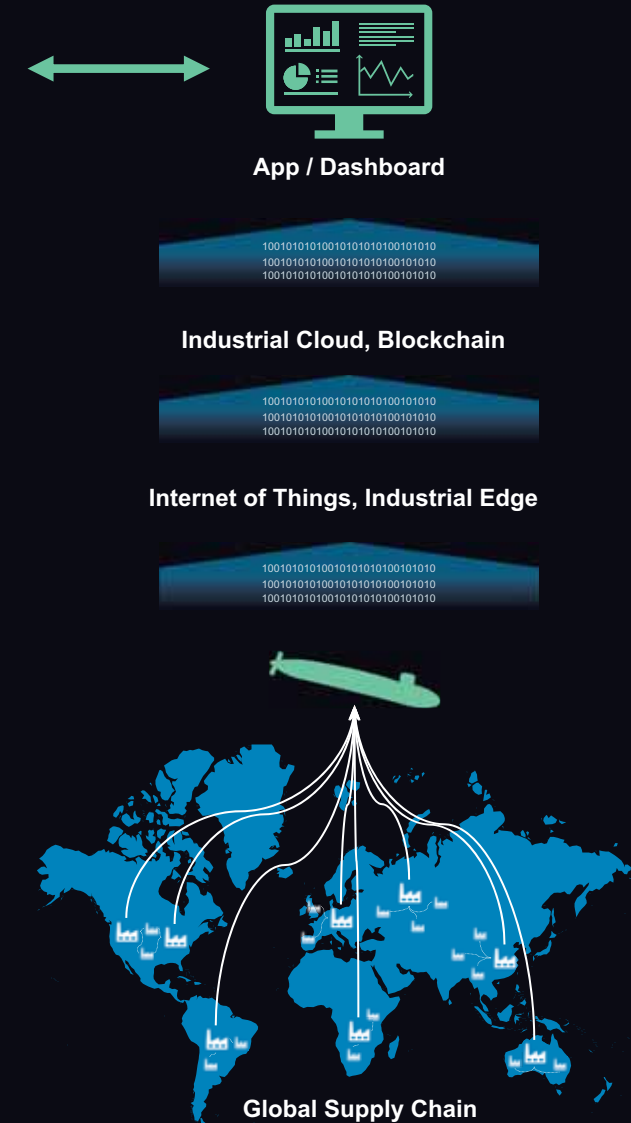

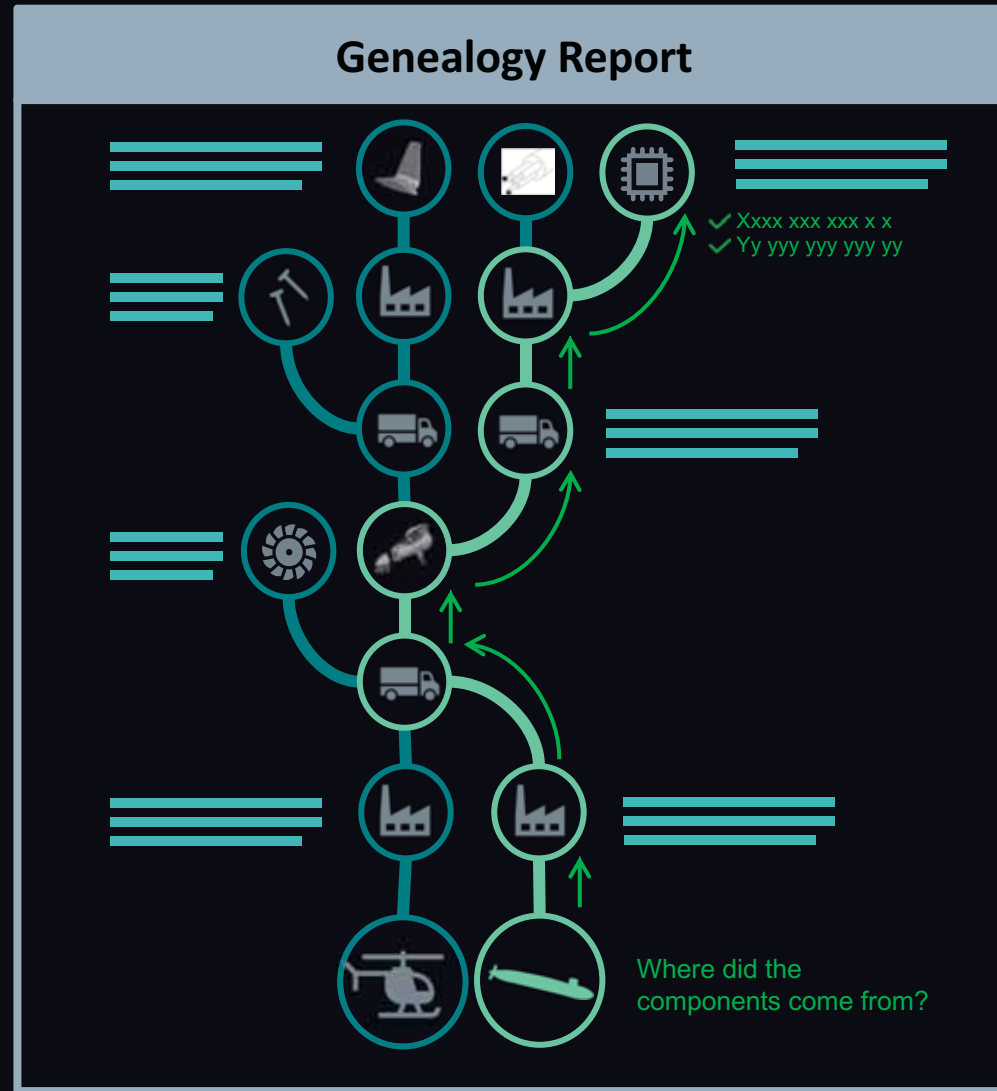

Xcelerator Trusted Supply Chain makes the genealogy of your product visible along the whole value chain.

Speeds up recalls, enables you to proof claims (origin, sustainable, quality, ...). Links meta-data from your production and the whole value chain and makes it accessible through the built-up genealogy. De-centralized, based on distributed ledger and other trust technology and works across business partners.

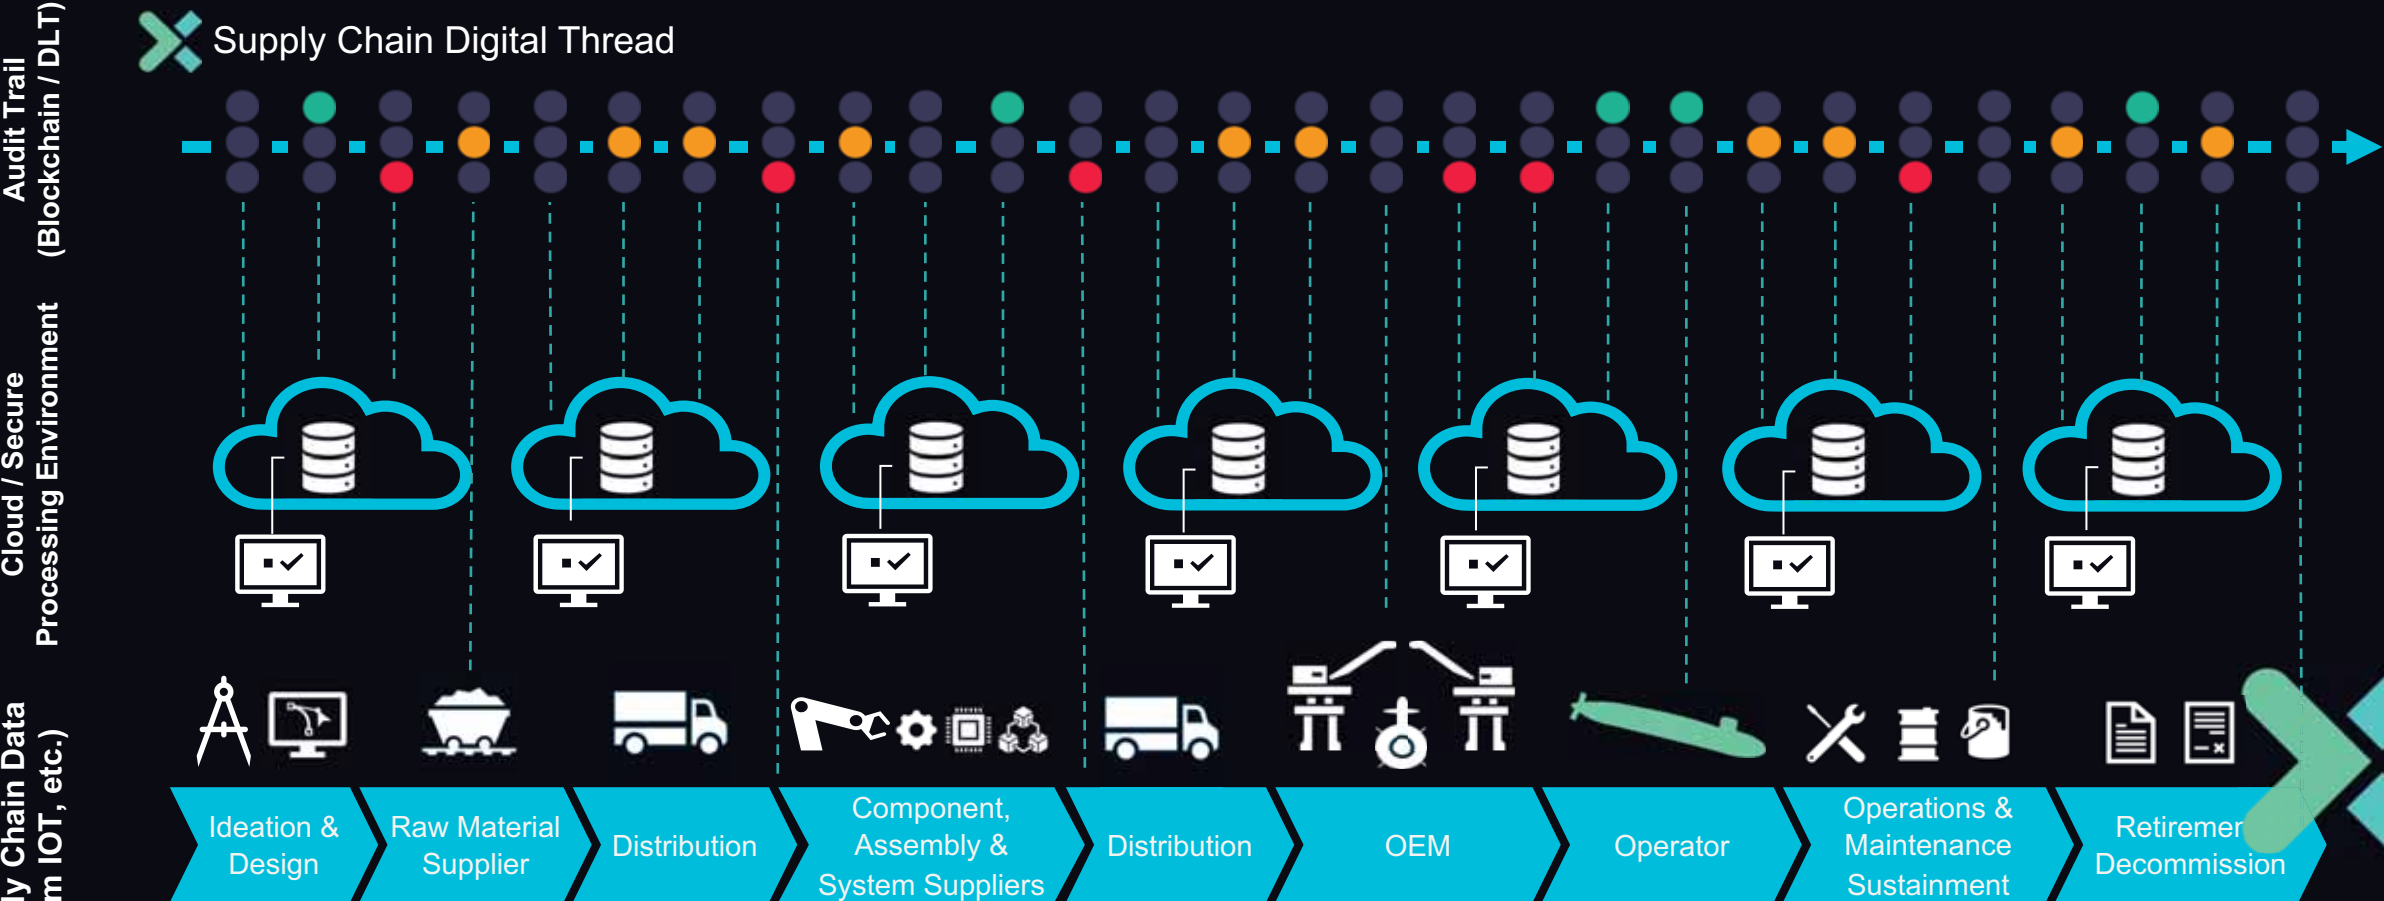

Collect, store and link data from any system along a value chain so that you can retrieve information concerning your product in seconds.

Unlike existing solutions, data available is not controlled by a central authority, is immutable and even complex information retrieval is done within seconds.

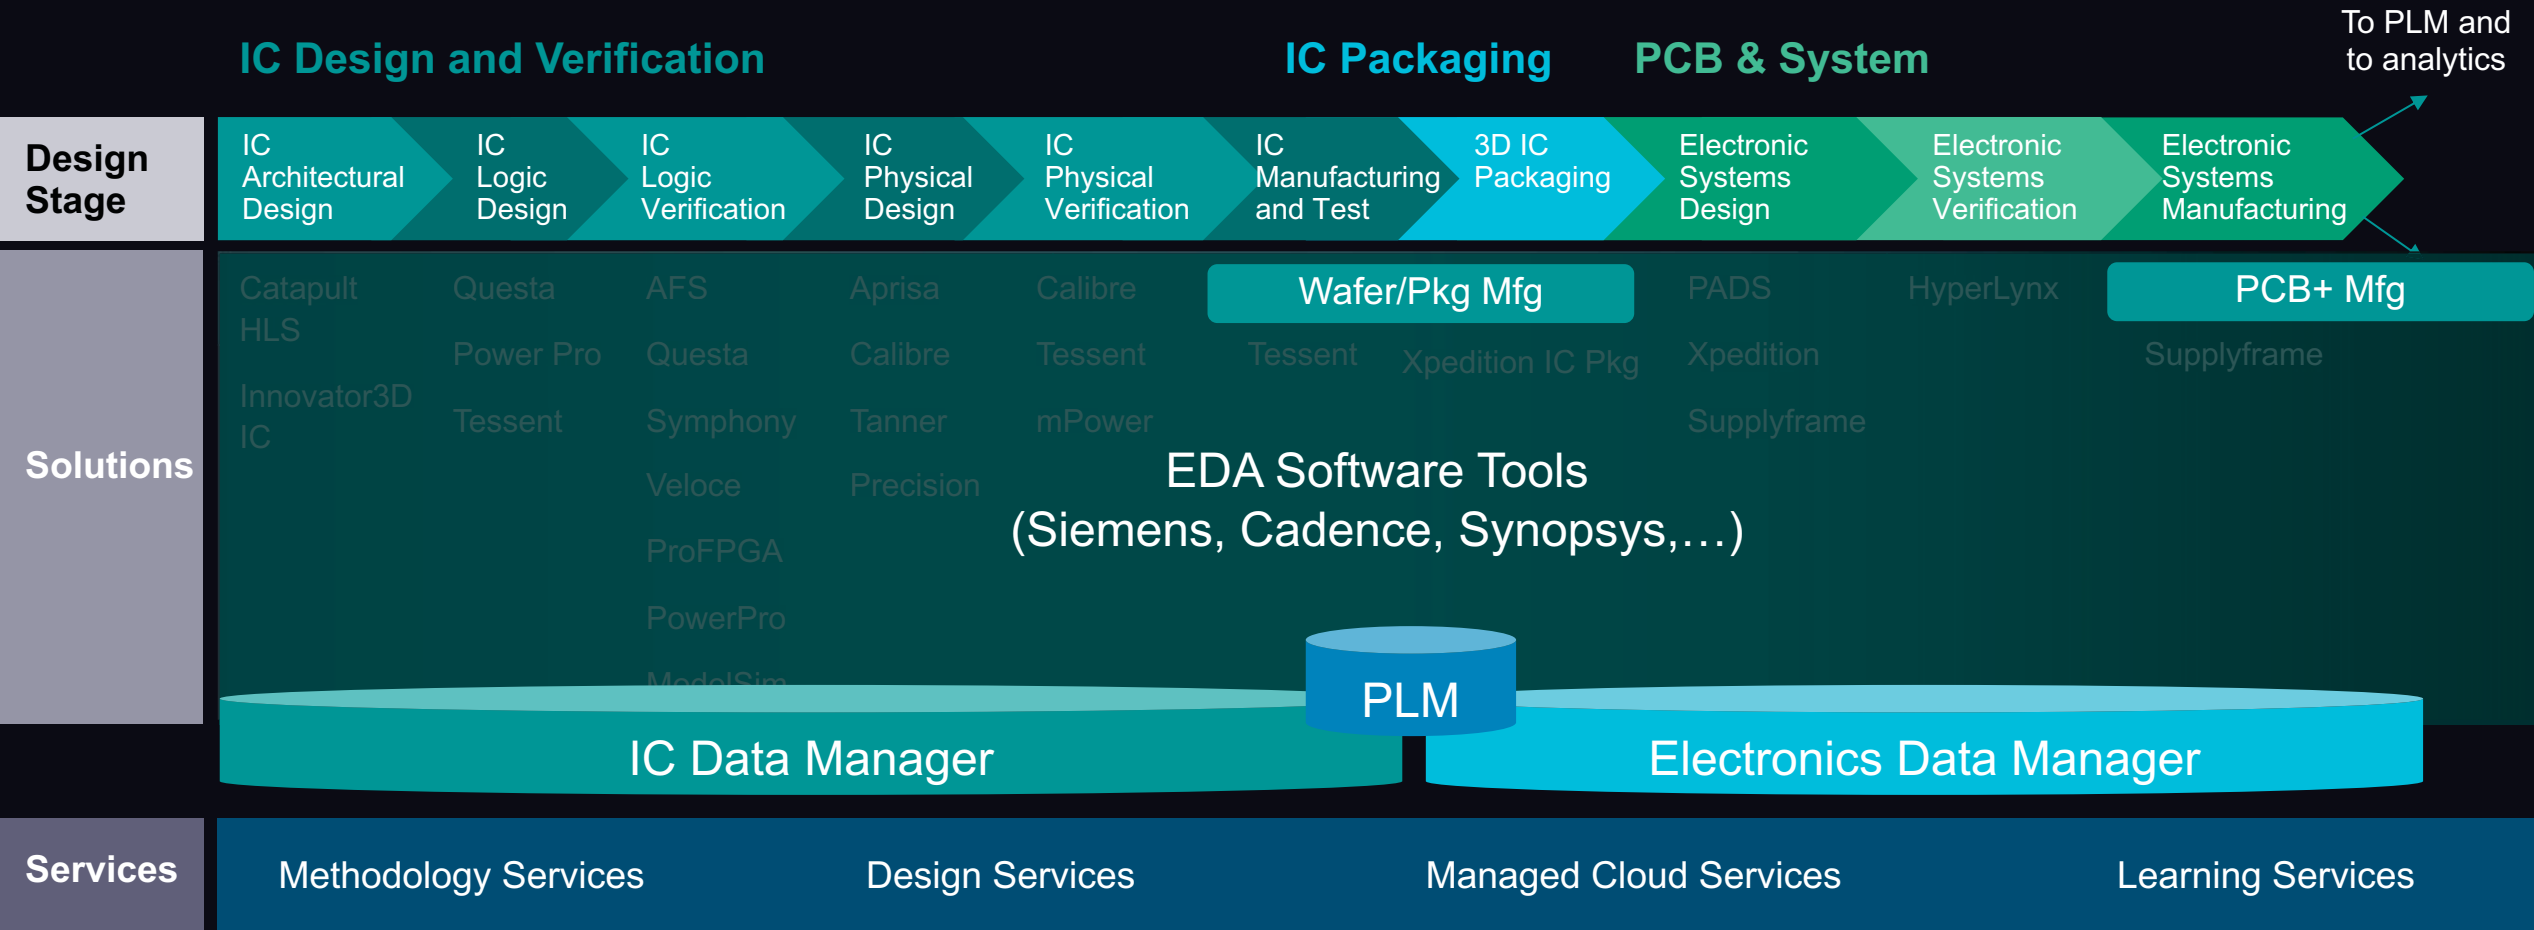

Siemens & Supply Chain

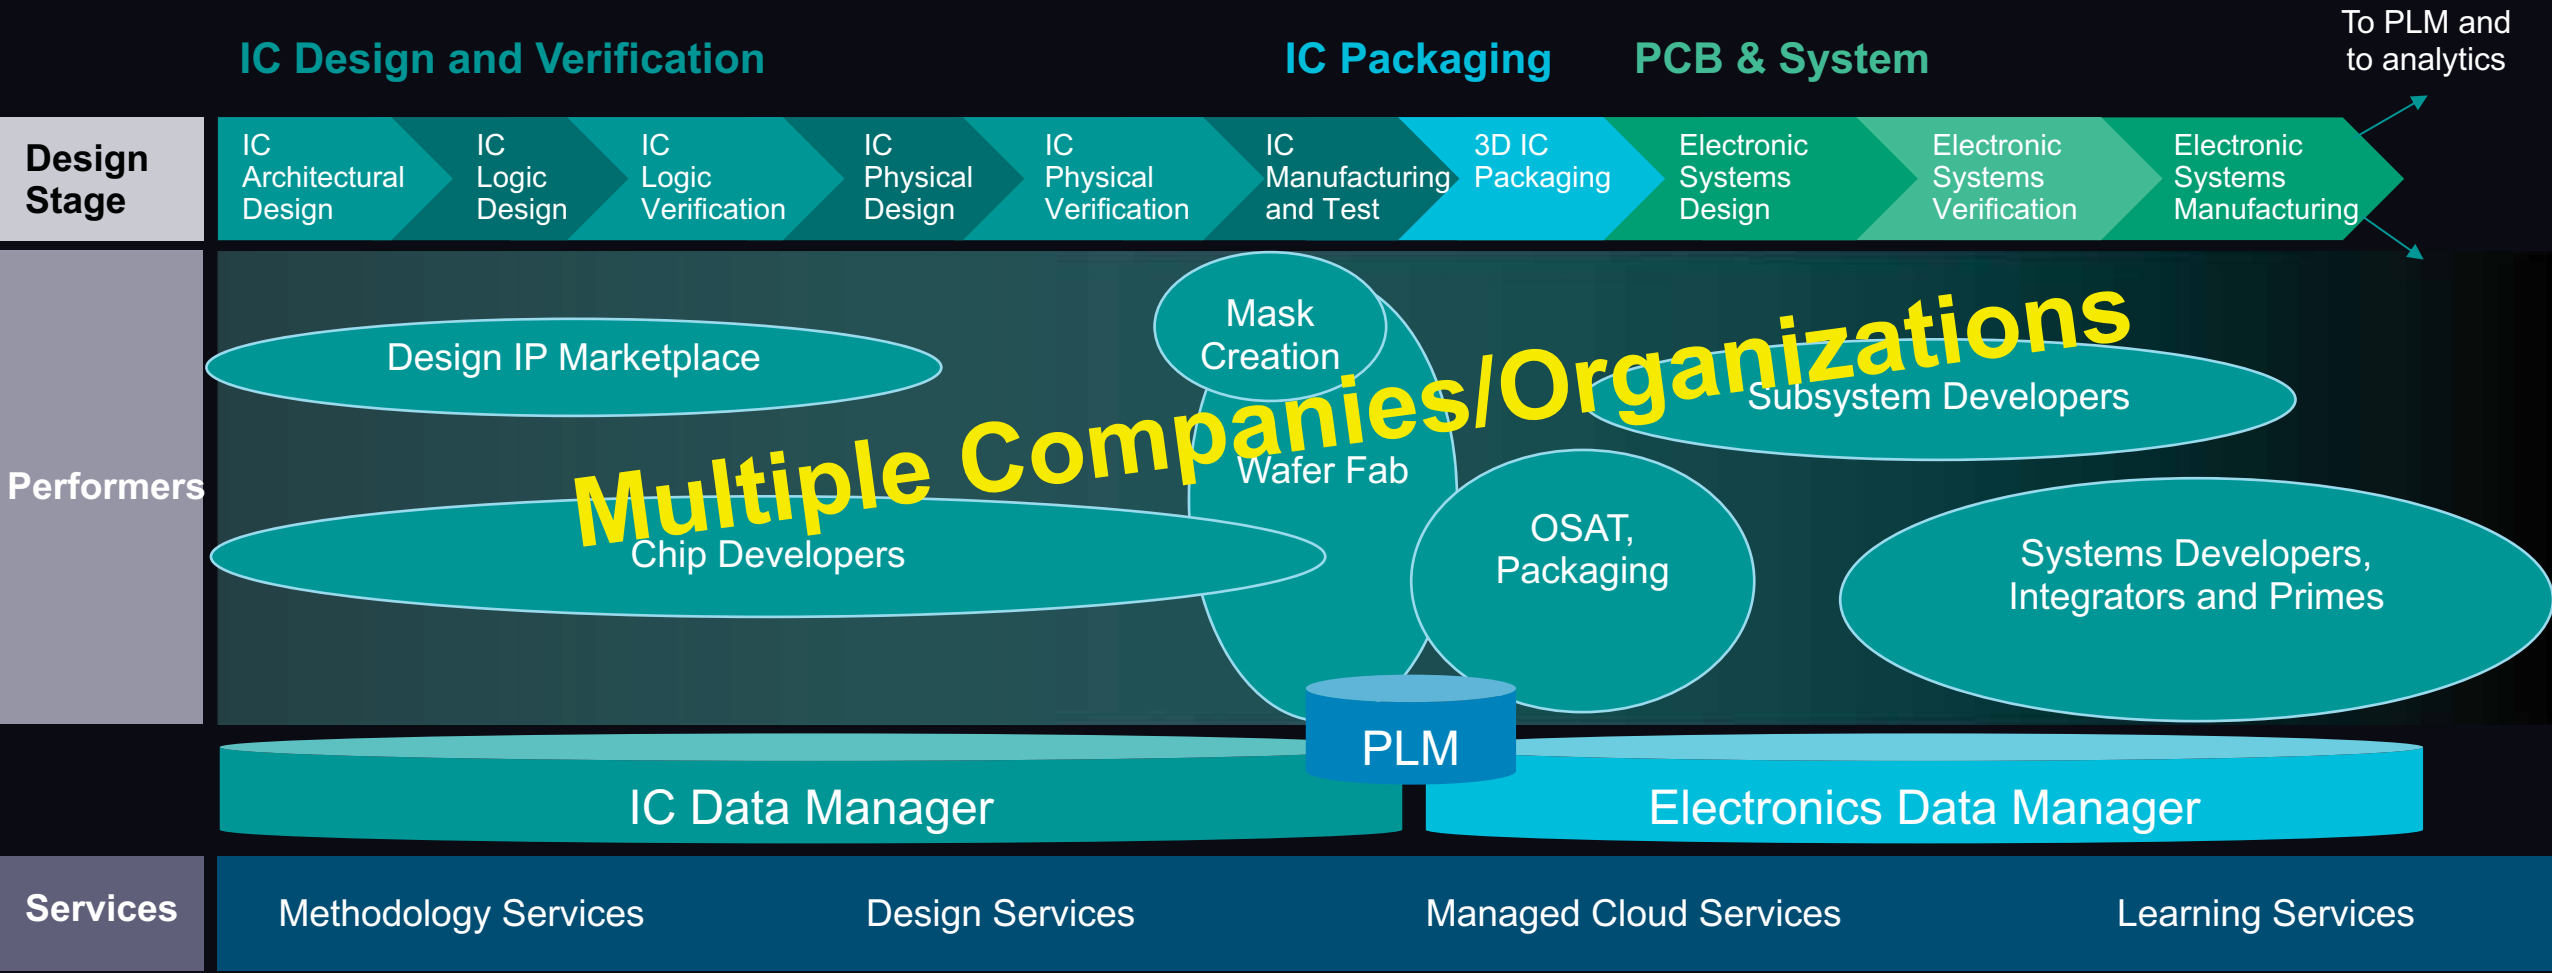

= No Visibility
 = Trusted
 = Moderate Risk
 = High Risk

Mapping SoT Risks to Assessment Information Sources / Standards

Stakeholder Assurance

"An assurance case provides a data structure to record risk assessment results based on the linkage between evidence->argument->claim"

Summary

- Complete solution for Evidence–based Assurance requires:
 - Detailed risk and mitigation identification and management
 - Supply chain infrastructure for capturing relevant data (e.g., unique IDs on everything, digital certificate methods,...)
 - Analysis tools to assess risk based on supply chain data
 - Address the details of chips, packaging, and PCBs with a scalable architecture extensible to the top of complex products
 - Enables the supply chain multiple companies to participate
- *Need to start merging the “pieces” of solutions in the ecosystem*
